All guide prices have been estimated based on the assumption that the average stallion will be collected from four times per week and produce 6 to 7 frozen doses per collection. Any variation from this may result in the actual cost changing from those quoted.

Guide prices include livery, on centre export health tests, collection & processing fees, dose fees and post thaw semen evaluation. They do not include pre-entry health tests, blacksmith, routine veterinary fees, storage, distribution and export fees and all prices are subject to VAT.

For EVA vaccinated stallions freezing semen for use outside the UK, add approximately £1,200 to the guide price as these countries require an EVA virus isolation test - please contact Stallion AI Services for further guidance

\*For stallions freezing for UK/EU only, EU health testing must be carried out before entry and after the stallion has left the centre. Please contact Stallion AI Services for further guidance

\*\* Estimated cost of pre -entry and post collection EU health testing. Please contact Stallion AI Services for further guidance

\*\*\* UK/USA/AUS/NZ/CAN/EU/UA/E/SAUDI = worldwide export. If you require other specific countries e.g. South Africa, Kuwait etc, these can be added on request. Other countries must be specified in advance and will result in additional health testing fees - please contact Stallion AI Services for further guidance.

In order to estimate the number of doses you require, on average it takes upto two doses of frozen semen to achieve a pregnancy and Stallion AI Services recommend that for commercial sales you allow upto 3 doses per breeding.

1 dose = 1 insemination

1 dose = 6 straws.
